What to Watch in the Near Future

How to Stay Up to Date

1. **Make an X (Twitter) account.**
   Many people from the frontier labs post there first, often daily.

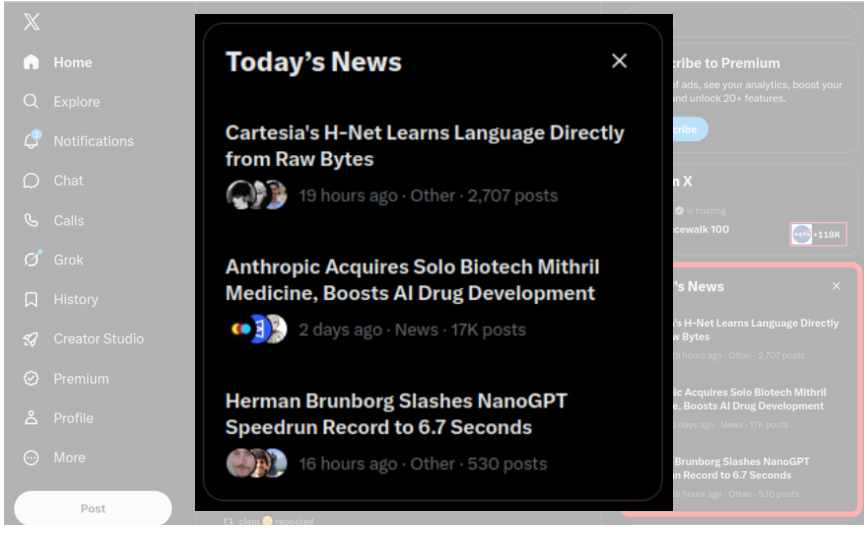

2. **Read "Today's News" on the home page.**
   It sums up the biggest updates of the day.

3. **Follow the right people.**
   Don't be fooled by clickbait.

Tibo @thsottiaux · Oct 28

Day 23/ Much requested iCloud Main & Calendar plugins. Just kidding, today is a reset. Still much requested though!

Who to Follow and Why

Who	Handle	Why
Andrej Karpathy	@karpathy	Clear explanations of LLMs and how to work with them
Thibault Sottiaux (tibo)	@thsottiaux	Leads OpenAI Codex; news on Codex releases and usage limits
Boris Cherny	@bcherny	Created Claude Code; how Anthropic uses its own agents
Tim Dettmers	@Tim_Dettmers	Agents in academic research; open models on small budgets
Victor Taelin	@VictorTaelin	Tests frontier models on hard coding problems
Felix Rieseberg	@felixrieseberg	Builds Claude's desktop apps at Anthropic; early product news

A few of the 251 accounts I follow, all of this kind.

What to Watch in the Near Future

FOMO Headline: OpenAI Agent Usage

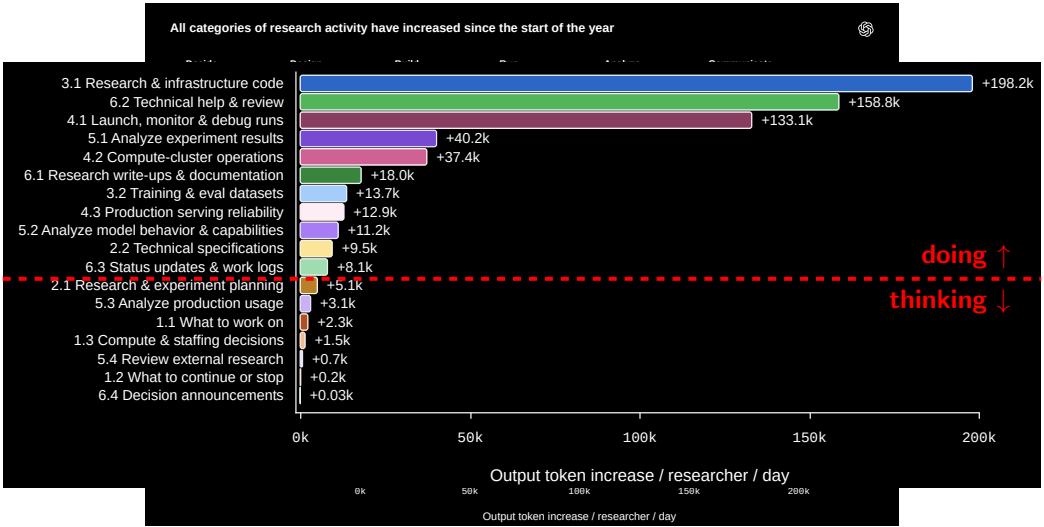

Median researcher, daily $ spent on internal coding agents. Source: OpenAI, "Research acceleration" (self-reported).

What do agents do at OpenAI?

Increase in output tokens per researcher per day, by research activity. Source: OpenAI, "Research acceleration" (self-reported).

What do agents do at OpenAI?

Use Agents or Be Left Behind

Tim Dettmers, January 2026

Dettmers' Interpretation

Tim Dettmers' hypotheses, read against the OpenAI usage data

What the OpenAI chart suggests

Agents took over the *doing*: code, runs, technical help are ∼75% of the extra tokens.

Sources: timdettmers.com/2026/01/13/use-agents-or-be-left-behind; OpenAI, "Research acceleration" (self-reported).

Dettmers' Interpretation

Tim Dettmers' hypotheses, read against the OpenAI usage data

What the OpenAI chart suggests

Agents took over the *doing*: code, runs, technical help are ∼75% of the extra tokens.

Did agents take over the *thinking*? The chart can't say: a plan or a decision is short, so tokens are the wrong measure.

Sources: timdettmers.com/2026/01/13/use-agents-or-be-left-behind; OpenAI, "Research acceleration" (self-reported).

Dettmers' Interpretation

Tim Dettmers' hypotheses, read against the OpenAI usage data

What the OpenAI chart suggests

Agents took over the *doing*: code, runs, technical help are ∼75% of the extra tokens.

Did agents take over the *thinking*? The chart can't say: a plan or a decision is short, so tokens are the wrong measure.

Frequent, repetitive work grew most; rare decisions grew least.

Sources: timdettmers.com/2026/01/13/use-agents-or-be-left-behind; OpenAI, "Research acceleration" (self-reported).

Dettmers' Interpretation

Tim Dettmers' hypotheses, read against the OpenAI usage data

What the OpenAI chart suggests

Agents took over the *doing*: code, runs, technical help are ∼75% of the extra tokens.

Did agents take over the *thinking*? The chart can't say: a plan or a decision is short, so tokens are the wrong measure.

Frequent, repetitive work grew most; rare decisions grew least.

All 18 activities went up: agents are used everywhere, but how much and how exactly is still open.

Sources: timdettmers.com/2026/01/13/use-agents-or-be-left-behind; OpenAI, "Research acceleration" (self-reported).

Dettmers' Interpretation

Tim Dettmers' hypotheses, read against the OpenAI usage data

What the OpenAI chart suggests	Dettmers says
Agents took over the *doing*: code, runs, technical help are ∼75% of the extra tokens.	"More than 90% of code and text should be written by agents."
Did agents take over the *thinking*? The chart can't say: a plan or a decision is short, so tokens are the wrong measure.	
Frequent, repetitive work grew most; rare decisions grew least.	
All 18 activities went up: agents are used everywhere, but how much and how exactly is still open.	

Sources: timdettmers.com/2026/01/13/use-agents-or-be-left-behind; OpenAI, "Research acceleration" (self-reported).

Dettmers' Interpretation

Tim Dettmers' hypotheses, read against the OpenAI usage data

What the OpenAI chart suggests	**Dettmers says**
Agents took over the *doing*: code, runs, technical help are $\sim$75% of the extra tokens.	"More than 90% of code and text should be written by agents."
Did agents take over the *thinking*? The chart can't say: a plan or a decision is short, so tokens are the wrong measure.	His posts are $>$ 95% AI, but he still dictates (1 h) and reviews (2 h).
Frequent, repetitive work grew most; rare decisions grew least.	
All 18 activities went up: agents are used everywhere, but how much and how exactly is still open.	

Sources: timdettmers.com/2026/01/13/use-agents-or-be-left-behind; OpenAI, "Research acceleration" (self-reported).

Dettmers' Interpretation

Tim Dettmers' hypotheses, read against the OpenAI usage data

What the OpenAI chart suggests	**Dettmers says**
Agents took over the *doing*: code, runs, technical help are $\sim$75% of the extra tokens.	"More than 90% of code and text should be written by agents."
Did agents take over the *thinking*? The chart can't say: a plan or a decision is short, so tokens are the wrong measure.	His posts are $>$ 95% AI, but he still dictates (1 h) and reviews (2 h).
Frequent, repetitive work grew most; rare decisions grew least.	Automate only if how often $\times$ time saved $>$ time to build.
All 18 activities went up: agents are used everywhere, but how much and how exactly is still open.	

Sources: timdettmers.com/2026/01/13/use-agents-or-be-left-behind; OpenAI, "Research acceleration" (self-reported).

Dettmers' Interpretation

Tim Dettmers' hypotheses, read against the OpenAI usage data

What the OpenAI chart suggests	**Dettmers says**
Agents took over the *doing*: code, runs, technical help are $\sim$75% of the extra tokens.	"More than 90% of code and text should be written by agents."
Did agents take over the *thinking*? The chart can't say: a plan or a decision is short, so tokens are the wrong measure.	His posts are $>$ 95% AI, but he still dictates (1 h) and reviews (2 h).
Frequent, repetitive work grew most; rare decisions grew least.	Automate only if how often $\times$ time saved $>$ time to build.
All 18 activities went up: agents are used everywhere, but how much and how exactly is still open.	Agent use is a *skill*: practice, expect failures (his email agent: 100+ h, net negative).

Sources: timdettmers.com/2026/01/13/use-agents-or-be-left-behind; OpenAI, "Research acceleration" (self-reported).
